

Koussay Akchi

Cloud Engineer

Email: akchikoussay@gmail.com | Phone: +216 40 862 777 | Location: Tunis, Tunisia | Website: koussay.tn | LinkedIn: linkedin.com/in/koussay-akchi | GitHub: github.com/Koussay-Akchi

Profile

I am a Full Stack Software Engineer with a strong focus on building robust web applications, cloud-native systems, and automation solutions. I enjoy working across the stack, from backend architecture to user-facing interfaces, and I continuously improve my skills through projects and hands-on engineering work.

Experience

Cloud Engineering Intern

Jun 2026 - Aug 2026

Next Step | Tunisia

Designed and deployed a unified API and AI Gateway platform on Apache APISIX, centralizing API management, load balancing, and AI orchestration in a Kubernetes-native environment.

- Built AI orchestration for OpenAI, Claude, Gemini, and DeepSeek with token usage tracking and PII masking.
- Implemented multi-tenant isolation, JWT and key authentication, Redis-based rate limiting, load balancing, and canary routing strategies.
- Delivered a React and Node.js self-service portal with RBAC, observability dashboards, and monitoring coverage.
- Validated service resilience using chaos engineering and automated CI/CD deployment pipelines across cloud-native environments.

Tools: Apache APISIX, Kubernetes, Helm, Lua, Kafka, Prometheus, Grafana, Jaeger, Redis, Node.js, React, PostgreSQL

Full Stack Software Engineer

Jul 2025 - Present

OpkodeLabs | Tunisia

Developed WattLink, a multi-tenant EV charging management platform built on the OCPP 1.6 protocol, with real-time visibility into station status, pricing, sessions, and telemetry data.

- Built a real-time monitoring system using Laravel, PostgreSQL, Redis Pub/Sub, Socket.IO, and Grafana.
- Implemented remote operator controls for charging sessions, pricing updates, and live telemetry dashboards.
- Designed secure multi-tenant workflows to isolate data and operations across customer networks.
- Delivered production-ready infrastructure and tooling with Python, Docker, and reliable service orchestration.

Tools: Laravel, Python, Redis, Docker, Socket.IO, Grafana, PostgreSQL

Full Stack Software Engineer

Feb 2025 - Dec 2025

HexaFlow | Tunisia

Developed dynamic web applications with React, Next.js, Node.js, and Java while improving system architecture with containerized deployments and cloud-ready patterns.

- Delivered customer-facing features in agile teams with a focus on maintainability and timely releases.
- Improved deployment workflows by integrating Docker and cloud infrastructure tooling.
- Enhanced frontend performance, state management, and component modularity for seamless user experiences.
- Integrated automated CI/CD checks and containerized environments to ensure reliable multi-service deployments.

Tools: React, Next.js, Node.js, Java, Docker, Terraform, Azure

Full Stack Software Engineer

Jun 2024 - Jan 2025

Wecraft | Tunisia

Developed and maintained a CRM platform for pharmaceutical laboratories, covering both the user interface and backend business logic for research, sales, and compliance workflows.

- Implemented front-end interfaces for laboratory operations and internal data entry flows.

- Built backend services and business rules to support product, customer, and order management.
- Added automated testing across the stack to reduce regressions and improve release stability.
- Engineered robust RESTful endpoints with role-based access control and token lifecycle verification.

Tools: React, Quarkus, Docker, JWT, PostgreSQL, MongoDB

End of Studies Internship

Jan 2024 - Jun 2024

Wecraft | Tunisia

Worked on the CRM for pharmaceutical laboratories during my internship, contributing across the stack while learning production-grade web app architecture and development workflows.

- Participated in the design and initial implementation of the application architecture.
- Contributed to both front-end features and back-end services for core business processes.
- Collaborated with the team to improve code quality, maintainability, and deployment practices.
- Structured data schemas and storage strategies across relational and NoSQL databases for laboratory workflows.

Tools: React, Quarkus, Docker, JWT, PostgreSQL, MongoDB

Summer Internship

Jun 2023 - Jul 2023

Alliance Technologie | Tunisia

Developed a microservice and API for managing electronic purchase vouchers for SNDP customers.

- Built backend logic for voucher lifecycle management and validation flows.
- Integrated application services with secure data handling and business rules.
- Collaborated on API design and service integration to support customer workflows.
- Automated database migrations and transactional queries ensuring strict financial integrity for transactions.

Tools: C#, ASP.NET, Java, PostgreSQL

Education

Engineering Degree in Software Engineering

2024 - Present

ESPRIT

Bachelor's Degree in Computer Science (GLSI)

2021 - 2024

ISTIC Borj Cedria

Skills

Frontend: Next.js, React, Angular, Flutter, Figma, TypeScript, JavaScript, HTML, CSS

Backend: Java, Node.js, Python, Laravel, Spring, Quarkus, PHP, C, MediaWiki, REST APIs, GraphQL

Cloud / DevOps: Terraform, IaaS (Infrastructure as Code), CI/CD, Jenkins, Azure, Kubernetes, Docker, Ansible, Linux, OpenStack, Grafana, Prometheus, Helm, Apache APISIX, Kafka, Jaeger, OpenTelemetry, Vercel, Postman, SonarQube

AI: PyTorch, TensorFlow, Hugging Face, Ollama, OpenAI, LLMs, AI/ML workflows

Other Tools: MongoDB, PostgreSQL, Redis, Firebase, MediaWiki, PostHog, Figma, Lua, Linux, Ollama, C, PHP

Languages

English: Fluent • French: Fluent • Arabic: Native

Certifications

-
- CCNA: Switching, Routing, and Wireless Essentials — Cisco
